CORDURA® NYCO fabrics for workwear market debut

SpecialtyFabricsReview.com | October 21, 2011

In line with the **CORDURA®** brand team's commitment to developing innovative and protective fabrics for the workwear industry, a new range of **CORDURA® NYCO** fabrics from Malaysian based **Penfabric**, part of the Japanese **Toray Group** of companies, will be introduced to the European workwear market at the A+A show in Dusseldorf, Germany.

The innovative range includes four fabrics, each in a blend of 75 percent cotton, 25 percent high strength **INVISTA T420** nylon 6,6. The fibers are intimately blended in both the warp and weft direction, and available in twill and canvas constructions in weights of 325gr/m² and 380gr/m². The new fabric offers long-lasting durability without compromising comfort, suitable for a wide range of garment types, especially valuable for harsh working conditions putting high stress on garments.

The **CORDURA® NYCO** fabric range has a higher percentage of cotton fiber than the established polyester/cotton fabrics with similar weights and constructions, and a high degree of absorption. The fabrics are more cotton-like and less synthetic in touch, adding to the comfort requirement so important in today's working environments. The canvas fabrics offer a modern and popular appearance in line with casual apparel garments.
